PROFESSIONAL SUMMARY

Software engineering professional transitioning toward product management, with experience delivering production web features and building end-to-end product prototypes. Combines a technical foundation with interest in problem framing, user workflows, feature definition, practical prioritization, and iterative product improvement. Comfortable discussing both user-facing experiences and the systems that support them.

PRODUCT & TECHNICAL SKILLS

Product: Problem framing, feature definition, user flows, requirements thinking, prioritization, feedback and iteration
Technical: Software development, APIs, databases, system design fundamentals, cloud architecture, CI/CD
Tools & Technologies: GitHub, React, TypeScript, Python/FastAPI, SQL, AWS, Kubernetes, Terraform

EXPERIENCE

Full Stack Developer — Kapiva (Adret Retail Pvt. Ltd.) | **Jul 2025 – Nov 2025**

- Delivered production features for a B2C digital product, working from implementation through integration and release.
- Designed and delivered audit logging for an internal operations dashboard, improving traceability of user actions.
- Built a clinical workflow feature for the Doctors Workbench covering prescriptions, patient histories, health-device data ingestion, and vital visualisation.

SELECTED PRODUCT & TECHNICAL PROJECTS

Nipp-On — AI-Assisted Japanese Learning Prototype | **github.com/akhilkumar0024/Nipp-On**

- Designed a JLPT N5-focused learning concept around vocabulary breakdowns, conversational tutoring, quizzes, and a persistent vocabulary notebook.
- Combined Gemini-powered tutoring with curated vocabulary content and browser speech capabilities, balancing AI-assisted interaction with a dependable fallback learning path.
- Built with React, TypeScript, Vite, and Vercel serverless functions; speech capabilities depend on browser and device support.

Smart Helmet SIM — Event-Driven IoT Workflow Simulation | **github.com/akhilkumar0024/IOT-EDGE-INFRA-SmartHelmet-SIM**

- Mapped telemetry, anomaly validation, rider override, and emergency-notification workflows in a software simulation.
- Used event queues, workflow orchestration, and operational alerts to explore failure handling and the behavior of a multi-step emergency process.
- Project scope is a cloud/software simulation, not physical hardware or validated real-world crash detection.

CloudScale URL Shortener & Analytics Platform | **github.com/akhilkumar0024/url-shortener-eks-platform**

- Built a platform with separate API, analytics, and frontend services, using Redis caching and PostgreSQL persistence for URL resolution.
- Separated click analytics from the redirect path with asynchronous SQS processing, exploring the trade-off between user-facing responsiveness and background work.
- Added Prometheus metrics and Kubernetes health endpoints to support operational visibility.

EDUCATION & TRAINING

DevOps & Cloud Engineering Program — StarAgile | Nov 2025 – Feb 2026
PG Diploma in Advanced Computing (PG-DAC) — CDAC ACTS, Pune | Sep 2023 – Feb 2024
Full Stack Development Program — Masai School | Sep 2024 – May 2025
B.Tech, Computer Science & Engineering — College of Engineering and Management, Punnapra | 2015 – 2019
